Professional Summary

Computer Systems Engineer with 3+ years of experience in Full Stack Development and QA Automation. Specialized in AI-driven software lifecycle automation (SDLC), with strong proficiency in React.js and Next.js (3 years), NestJS and Angular (1.5 years each), E2E testing with Playwright, and applied security analysis. English B2.

Education

Instituto Tecnológico de San Luis Potosí — San Luis Potosí, MX

B.S. in Computer Systems Engineering | August 2020 – December 2025

Specialization in Cybersecurity

Professional Experience

DaCodes — Remote

QA Engineer / Full Stack Developer | June 2024 – Present

- Full stack development of a project management and quoting platform: frontend with React.js, Next.js, and TypeScript; backend with NestJS, TypeORM, and MySQL; containerization with Docker.
- Managed deployments on AWS EC2 using PM2 to ensure continuous availability; configured Elastic Load Balancers and API Gateways.
- Security analysis with Burp Suite and Caido: HTTP traffic interception, JWT vulnerability analysis, and verification of authentication flows and frontend routing.
- Stress testing with JMeter, API validation with Postman, and static code quality and security analysis with SonarQube and SonarCloud.

DaCodes — Remote

Quality Assurance Engineer | January 2022 – Present

- Execution of functional and non-functional tests: manual, exploratory, regression, smoke, integration, and load testing (JMeter, DDOSIFY).
- Developed automated test suites with Selenium WebDriver (Java and Python) and API testing scripts with Postman and Node.js.
- Implemented an AI-powered QA pipeline using Claude Code agents and skills to generate and execute E2E test cases via Playwright MCP, reducing smoke test execution time by **80%**.

Independent Frontend Developer — Personal Project

Twitter Clone (Pajarito Azul) | September 2023 – December 2023

- Built a minimalist SPA with React.js and TypeScript, implementing React Hooks for dynamic state management without page reloads.

AI Projects

Project	Description	Stack
AI-Driven-UI-Specification-QA-Automation-Suite	Claude Code multi-agent system: navigates live pages with Playwright MCP, auto-generates UI specs, creates E2E test cases, and executes them in the browser delivering a report with screenshot evidence	Claude Code, Playwright MCP, Node.js, Python, Shell hooks
AI-Code-Reviewer	NestJS tool with native Bitbucket webhook: when a PR is opened, automatically analyzes the code with Groq AI and posts review comments directly on the pull request	NestJS, TypeScript, Groq API, Bitbucket Webhooks, Docker, SonarQube
AI-Test-Case-Generator	Reads requirements from Excel, generates Gherkin (BDD) test cases with Groq AI, and automatically uploads them to Kiwi TCMS; also exports professional Word documentation	TypeScript, Groq API, Kiwi TCMS, Docker, Excel (XLSX)
Nova-Act-Test-Runner	Autonomous agents (LAMs) that execute E2E tests using natural language instructions on real interfaces	Python, Amazon Nova Act, AWS Secrets
Simple-RAG	RAG backend with NestJS: uploads PDFs, generates local embeddings with Ollama, stores them in Pinecone, and answers natural language queries using Groq API	NestJS, TypeScript, LangChain, Pinecone, Ollama, Groq API, PostgreSQL, Docker

Technical Skills

Languages: JavaScript/TypeScript (Advanced), Python (Intermediate)

Frontend: React.js, Next.js, Angular, Material UI

Backend: NestJS, Node.js, TypeORM, RESTful APIs

Databases: MySQL, PostgreSQL, Pinecone (vector)

AI & LLMs: Groq API, LangChain, Amazon Nova Act, RAG, Claude Code, Playwright MCP

QA & Testing: Playwright, Selenium WebDriver (Java & Python), JMeter, DDOSIFY, Postman, Kiwi TCMS

Security: Burp Suite, Caido, JWT analysis, SonarQube, SonarCloud

DevOps & Cloud: Docker, AWS (EC2, ELB, API Gateway), PM2, Bitbucket, CI/CD

Methodologies: SCRUM/Agile, Git/GitHub, Jira, Figma

Certifications

Certification	Issuer	Date
AWS Cloud Fundamentals	DaCodes	November 2023
Python Fundamentals	DaCodes	October 2023
React JS Fundamentals	DaCodes	August 2023
Quality Assurance Certification	DaCodes	December 2022
Introduction to Cybersecurity	Cisco	August 2022
Cybersecurity Essentials	Cisco	August 2022

Leadership & Activities

Coding Cup — TECNM | August 2020 – August 2023

Competitive Programming Participant: solved combinatorial problems, implemented optimized iterative and recursive algorithms, and managed execution time and memory constraints.

Languages

Spanish: Native · **English:** Upper Intermediate (B2)
